

HAND-FREE DEVICE EQUIPPED WITH EXPANSION FUNCTION MODULES

ABSTRACT

5 A hand-free device equipped with expansion function modules allows a
basic hand-free handset to attach expansion function modules depending on
users' requirements so that the existing hand-free handset can be upgraded to
equip additional or new function without obsolete. The invention consists of a
hand-free main body and externally connected expansion function modules of
10 various function desired. The function may be selected based on users'
requirements such as GPS, PDA enabling, or audio control dialing, etc.
